

- Because I am not regularly using any tools beside "Gemini", i chose to show of two more 'exotic' tools which I tested thoroughly.
- Both tools are - like many, that uses "AI" in their names - nothing more than a scam, unfortunate.

- **Hello History:**

- is heavily based towards a "woke" & "political correct" audience - which feels VERRY OFF while "talking" to historic figures;
- Also you can "talk" to Mao, Stalin and other horrible individuals, but same is NOT TRUE for anyone not on the far left;
- You would have a hard time finding anyone on the right political spectrum to text with;
- Also no one would truthfully tell the bad stuff that they have done
  - left is romanticized and always shown in good faith
  - right is not even present, or won't recognize their accurate thoughts  
( like Nietzsche for example - he had written about the Übermensch and other sick things, the AI won't even recognize this as his words )
  - That's verry frustrating and feels like twisting history, in favour of a radical left D.E.I. agenda.

- **DUST.tt:**

- feels like a stolen ChatGPT-API - nothing more
- With a hefty price-tag to it.

## Tested Tools:

### Hello History

.. lets you have **text-based conversations** with chatbots impersonating **historical figures**.

It uses AI to generate **responses** that are *supposedly* tailored to the chosen figure's **personality and knowledge of their time period**.

### Dust

.. focuses on **building** applications **on top of existing LLM** providers like OpenAI.

Their core product acts as an **internal company ChatGPT**, enabling semantic search across silos of data.

1

#### Hello History summed up:

- *Skip the app!*
- *Powerful AI assistants like Claude, Gemini, and ChatGPT already offer similar features – for FREE.*

#### Dust summed up:

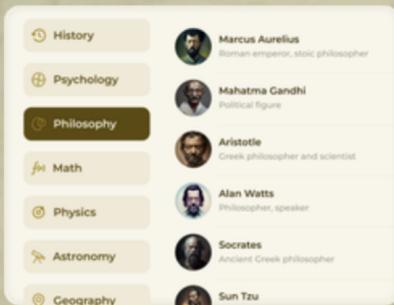

- *Established options like the ones names above, already provide powerful AI capabilities, which are way easier to implement – without a secondary app between you and the AI.*
- Dust offers a **feature to build your own "private" AI**. But that feature is not reliable, in my experience.

I would **not recommend** one of this tools.

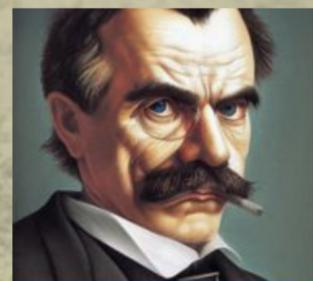

2

**The general Ideas of the app looked amazing.**

- **different categories**
- including **many interesting personalities**
- each with a well done "character sheet"
- Even **oddities** like *Sumerian kings*, and their *Gods, Buddha, Jesus, the Universe*, and many more are present in the App.

**Friedrich Nietzsche**

God is dead

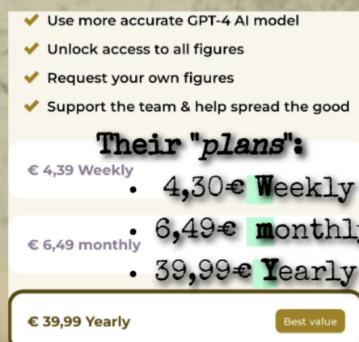

1844-1900

GPT 3.5  
Fun chats

GPT 4  
Deep conversations

## Pricing

- The app offers a **limited free tier** with **20 messages** to historical figures.  
*(..biases included..!)*
- These messages **expire** and cannot be saved **unless you upgrade to a paid plan.**

I am Friedrich Nietzsche, a 19th-century German philosopher. I wrote extensively on the concept of nihilism, the idea that life has no inherent meaning. I am best known for my theory of the Übermensch, or "superman," which proposes that individuals should strive to become the best versions of themselves. My writing style is often provocative and ironic, which has led to many misinterpretations of my works. My writings have had a major influence on modern philosophy, art, and culture.

# Dust.tt

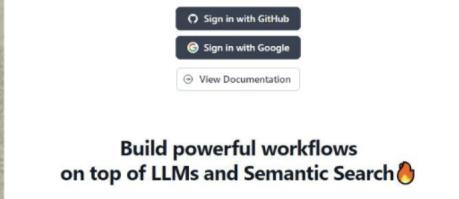

The Idea of Dust also sounded really amazing.

- make different personalized "agents"
- give roles to them:

.. so you might have specialized ChatBots for different purposes at hand all the time.

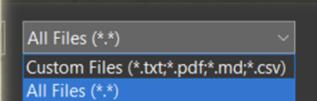

.. but they answer like ChatGPT 3 and do so in very short sentences and with a lot of delay.

## Make and Deploy Large Language Model Apps

A screenshot of the 'New Assistant' interface. It shows a 'Naming' step where a handle 'CodeReviewPokemon' is entered. A preview button is visible. The interface includes tabs for 'Instructions', 'Data sources &amp; Actions', and 'Naming', along with a 'Sharing' dropdown and a 'Save' button.

5

- these assistants should be able to access and manipulate all your files
- .. but, actually only \*.txt, \*.pdf, \*.md & \*.csv are valid no code file.

## Pricing:

- The app offers a limited free tier with some restricted assistants.
- that wont even remember your last conversation. (so it is pretty useless)
- Or 29€ per person, per month.

... no, thank you.
